

I am a computer networking professional and a ham radio operator for the past 32 years. Just because the technology exists to do Broadband Over Power Lines doesn't mean the FCC has to allow it. The only reason for the push to do BPL is it is CHEAP CHEAP CHEAP. Some signals should be encased in coaxial cable or even better fiber optic cable and this is one of them. As a ham radio operator I am already listening to birdies from 100's of other systems you allow all over the ham bands. I sure don't want to hear the nightmare this one would release! Let's be a responsible government agency and keep wide spectrum users encased, shielded or beaming SKYWARD.
